DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagata (6,008,842).

As to claim 1; Nagata disclose in column 1, lines 36-38, an overcurrent protection circuit comprises: means for directly detecting the beam current; column 1, lines 65-66, means for comparing the detected beam current with a predefined threshold level; and column 2, lines 1-5, means, coupled to the control input of said high voltage generating circuit, for generating a control signal, in dependence on said comparing means, for turning off said high voltage generating circuit.

As to claim 4, Nagata disclose in column 1, lines 11-54, an over-current protection circuit further comprises: means for preventing said control signal generating means from erroneously generating said control signal due to picture tube arcing and/or random noise.

Allowable Subject Matter

3. Claims 2,3 and 5-8 are objected to as being dependent upon a rejected base claim. The prior art of recond fails to teach or reasonably suggest that:

Application/Control Number: 09/933,555

Art Unit: 2838

Claim 3, an over-current protection circuit further comprises: means for generating a reference signal equivalent to said threshold level; and temperature compensating means for making said reference signal temperature independent.

Claims 6 and 7 are allowed due to their dependency on claim 3.

Claim 5, the over-current protection circuit comprises: a voltage supply coupled to said high voltage generating circuit for supplying said beam current; and a measuring resistor in series with said voltage supply and said high voltage generating circuit, wherein a voltage across said measuring resistor is proportional to the beam current.

Claim 2, the control signal generating means comprises means for latching said high voltage generating circuit in an off state.

Claim 8 is allowed due to its dependency on claim 2.

Claims 2, 3 and 5-8 would be allowable if rewritten in independent from including all of the limitations of the base claim.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lawrence Luk whose telephone number is (703)305-0617. The examiner can normally be reached on 7 a.m. to 5 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Sherry can be reached on (703) 308-1680. The fax phone numbers for the organization where this application or proceeding is assigned are

Application/Control Number: 09/933,555

Art Unit: 2838

(703)305-7724 for regular communications and (703)305-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-1782.

LWL Nov 5, 2003

Laurence hube examiner 11/5/03
